DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-27 are drawn to a data structure stored on a computer readable medium to

represent extended color gamut information for a pixel, classified in class 345, subclass 590.

II. Claims 28-37 and 48-55 are drawn to a method and system for displaying image data

with respect to the color information of pixels, classified in class 345, subclass 690.

II. Claims 38-47 and 56-60 are drawn to a method and system for encoding (or color

conversion) of image data using the respective color information of pixels, classified in class

345, subclass 600.

Inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as combination, subcombination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed

does not require the particulars of the subcombination as claimed for patentability, and (2) that the

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

case, the combination as claimed does not require the particulars of the subcombination as claimed

because the invention I (the combination) is directed to a data structure stored on a computer

readable medium that represents a color gamut information for a pixel and invention I do not

contain limitations that are (a) directed to a method and system for displaying the image as recited in

claims 28-37 and 48-55, and (b) directed to a method and system for encoding an image data. The

subcombinations has separate utilities such as invention II is directed to a method and system for

Art Unit: 2624

displaying image data with respect to the color information of pixels and invention III is directed to a method and system for encoding image data with respect to color information of pixels.

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination III has separate utility such as a method and system for encoding (or color conversion) of an image. See MPEP § 806.05(d).

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a).

Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Application/Control Number: 10/615,860 Page 4

Art Unit: 2624

Therefore, inventions I, II and III represent inventions that are distinct for the reasons given

above and have acquired a separate status in the art as shown by their different subject matter and

different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Manav Seth whose telephone number is (571) 272-7456. The examiner can

normally be reached on Monday to Friday from 8:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Bhavesh Mehta, can be reached on (571) 272-7453. The fax phone number for the organization

where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR system,

see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system,

contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
